

Dr Allen Dobrovolsky

Director

AESA Films • Institute of Geochemistry & Physics of Minerals
Coomera, Queensland, Australia • 41 [28](#)

I started my scientific career with a PhD research of the consequences of the Chernobyl disaster in 1986. In 1997 I established a consulting firm and received my environmental laboratory accreditation by the National Association of Testing Authorities in 2003.

I've been always fascinated by the unique natural beauty of the Australian environment, particularly, by the Great Barrier Reef. As a conscientious scientist, I've been following the developments around the environmental issues of the proposed and approved sediment dredging operations in the vicinity of the reefs.

Since 2014 I've been conducting my own monitoring program at the Great Barrier Reef in order to evaluate the changes in the water quality at the reef.

Soon after a team of independent videographers and the renowned editor, Alex Fitzwater, joined my expeditions. We had an opportunity to interview top coral and marine research scientists, along with locals, activists, politicians and indigenous leaders, who were all concerned about the poor outlook for the reef due to the multiple port developments along the reef that are contributing to its poor health.

In February 2017, I established a film production branch, AESA Films, within my main environmental consulting firm in order to complete a documentary about the environmental and political issues at the reef.
