

# EVOLUTION – The Genius Equation

A Documentary by Paulina Amador

*Are you ready for an extraordinary journey? Is there a secret to being genius? Could advancements in technology be working against our own evolution — somehow preventing us from thinking for ourselves?*

Exploring brilliant minds from antiquity through the modern era, with expert interviews in A.I., neurology, mind, and the nature of Genius. The audience is shown a Roadmap of the Genius Equation that leads to a quest of self-discovery into EVOLUTION.

The documentary aims to make a case for the untapped resources of the mind. In an age of ever-expanding Artificial Intelligence and market-driven techno-surveillance, are we losing our ability to have control of our own thoughts? Will A.I. take over and wipe us out? Some of the greatest thinkers of our time suggest it might do just that . . . But what if everyone woke up to their own unique capacity for inspiration, innovation, and invention? What if genius is a state of mind that anyone can access?

It is not in giving our power away to external stimuli, but rather in realizing something simple and overlooked at the core of who we are, that we come face to face with genius. To download and stream remarkable ideas, new solutions to problems and scientific breakthroughs, will bring about change that ultimately benefits all.

Chronicling the uniquely visionary minds of women and men of historical renown, the film considers the enormous impact made by Marie Curie (scientist – Nobel Prizes in physics, 1903, chemistry, 1911), Leonardo da Vinci (the universal genius), Ninhursag (Sumerian goddess, geneticist), Aspasia (rhetorician), Mary Magdalene (initiate in her own right, disciple of Jesus), Hypatia (astronomer, mathematician), Perenelle Flammel (alchemist, benefactress), Joan of Arc (visionary warrior), Mileva Maric-Einstein (scientist), Elizabeth I (sovereign queen).

The documentary includes dynamic discussions presented by contemporary experts in their fields. The proposed list of interviewees are Michio Kaku, Norman Doidge, David Gelernter, Sam Sternberg, Poppy Crum, Feryal Ozel, Chiara Marletto, Paris Reid, Stanley Krippner, Philippa Gregory, JZ Knight and Ramtha, Margaret Starbird and Jason Padgett.

This one-of-a-kind documentary is committed to being rich in visual beauty that blends deeply evocative and thought-provoking imagery with a futuristic tone. ***EVOLUTION – The Genius Equation*** will leave you with answers to questions you didn't know you had.

**Secured Talent:** Linda Evans <https://www.imdb.com/name/nm0002067/> - Narrator
