Creative Process & AI Disclosure

AI-Generated Video Production

This document describes how the work was created. The production pipeline consisted of three stages: image generation, video generation, and post-production editing.

Production Credits

Production type	Individual work (solo production)
Role	All stages, including planning, story, prompt writing, selection of results, editing and color grading, were carried out by one person.
Email	gunky1@naver.com

1. AI Tools and Models Used

Stage	Tool	Developer	Model / Version
Image generation	Nano Banana	Google	Nano Banana 2
Video generation	Seedance	ByteDance	Seedance 2.0, Seedance 2.5
Music / Sound	Suno	Suno, Inc.	Suno (paid subscription; commercial use licensed)
Post-production	Adobe After Effects	Adobe	Non-generative editing software (no AI features used)

2. Role of AI by Area

Area	AI used?	Role
Writing (story, prompts)	No	The story was conceived and written entirely by the creator. All prompts were written and revised by the creator.
Image creation	Yes	Nano Banana 2 generated all still images, which formed the visual foundation of the work.
Animation / Video	Yes	Seedance 2.0 and 2.5 converted the generated still images into video sequences, producing the motion and scene transitions.
Music / Sound	Yes (partial)	Some tracks were generated with Suno under a paid subscription, and some were purchased from Shutterstock Music. Both are properly licensed, so there are no copyright issues.
Editing	No	All editing and color grading were performed manually by the creator in Adobe After Effects, without the use of AI features.

3. Elements Generated or Modified by AI

- **AI-generated:** all still images (Nano Banana 2).
- **AI-generated:** all video motion and scene transitions derived from those images (Seedance 2.0 and 2.5).
- **AI-generated:** music and sound created with Suno.

- **Human-modified AI output:** the AI-generated clips were selected, cut, sequenced and color graded by the creator in After Effects.

4. Materials Produced by Conventional Methods

- The story and overall narrative, written by the creator.
- All editing (cut selection, sequencing, timing and transitions) performed manually in Adobe After Effects.
- All color grading performed manually in Adobe After Effects.
- Licensed stock music purchased from Shutterstock Music (not AI-generated; no copyright issues).

5. Human Creative Role and Decisions

- **Story:** the overall story was conceived independently by the creator.
- **Prompting:** prompts were revised repeatedly to achieve the intended camera angles and compositions.
- **Selection:** from the generated results, the creator selected only the cuts that connect smoothly to the preceding and following shots and contain no visual breaks or glitches.
- **Editing and color grading:** the creator personally edited the sequence so that the cuts flow seamlessly, and performed all color grading by hand.
- **Final approval:** the creator made all final decisions on what appears in the finished work.
